8.1 Solar power supply kit

The Solar Supply system is a portable battery that can be charged by a small solar panel. With the 12V battery and USB connection the Solar Supply System can be used for many different purposes. For example a light during delivery of children, to run a microscope or to charge your mobile phone. Even in cloudy days the small solar can provide enough energy to run more than one microscope.

9.2 Solar rechargeable lamp kit

The Solar Lamp Collection is designed for areas with no access to electricity and in particular for people who are still in need to use the toxic kerosene lanterns. By using a Solar Lamp you avoid indoor air pollution caused by kerosene lanterns. The collection contains strong solar powered torches but also standing table lights in small and big sizes. When fully charged the Solar Lamp can provide more than 6 hours of light. But most important they are affordable, safe and clean.
