

Our final offerings for January and a recap of the past month

New!

New Dossiers for Cancer Treatment

We are pleased to feature three CTD dossiers of cancer treatment drugs administered by injection as part of a chemotherapy regimen.

These dossiers are available for license and supply arrangements.

If you operate in the UK, we would consider a duplicate license or own label supply arrangement.

- **Bendamustine Hydrochloride 2.5mg/ml powder** for concentrate for solution for infusion or injection used to treat in the main chronic lymphocytic leukaemia, multiple myeloma, and non-Hodgkin's lymphoma.
- **Carmustine 100mg powder** for solution for infusion or injection with solvent used to treat brain tumours, non-Hodgkin's lymphoma, and Hodgkin's lymphoma.
- **Melphalan 50 mg powder** for solution for injection/infusion used to treat multiple myeloma, ovarian cancer, melanoma.

To register your interest in these new product dossiers please email ip@icepharmagroup.com or click the button below.

If you are seeking a specific product dossier not on this list, or even a part dossier for your development work, we have an extensive list of part dossier's available upon request.

We offer a sourcing service at a competitive price and work with our extensive network across the globe to fulfill your requirements.

Additionally, if the dossier you select is not in CTD format, we can provide a range of services to match your needs.

If you wish to enquire about the above dossiers or our sourcing service, please get in touch using the button below with your dossier requirements and we will send you a proposal.

Alternatively please email your dossier requirements over to ***info@icepharmagroup.com***.
